

Appendix 2 - Carbon Footprint Certification - Anhydrite

Carbon Footprint Certification

The calculated ex-works Carbon Footprint for Francis Flower, Runcorn Anhydrite processing operations for 2015 is no more than **19.99kg CO₂/tonne product output**.

The basis for calculation is the Government standard document “2012 Guideline to Defra Greenhouse Gas (GHG) Emissions Conversion Factors”.

The footprint covers the source of carbon emissions from relevant business activities; specifically utilities used in production, the delivery of raw materials to site and associated personnel activities. The figure represents emissions for ex-works production at the factory gate.

The certification was undertaken by TM Consultants Ltd.
